Welcome to The World at War – a brand new magazine concept that we at Guideline are very excited about. Published in co-operation with IBG of Poland - a major player in the plastic modelling world both as an importer and dealer and as a manufacturer of high quality injection moulded kits under their own brand - World at War brings together expert knowledge and injection moulding technology to bring you the ultimate kit and reference collection combined.

Yes, it's a kit, but it's also a magazine. The sixteen pages of each issue will include not only the instructions for the kit itself but also a comprehensive profile of the vehicle depicted with details on its history and development, its service use, and the equipment fit that makes it unique, as well as profiles of some of the military commanders under whom it was used. This is not one of those skin-deep generic part series' that glosses over those minor matters that make all the difference – **The World at War** is designed by modellers for modellers and recognises what it is that real enthusiasts are looking for in a kit, and as a publisher of magazines with some forty years' experience of providing expertise to the model-building community Guideline is proud to be a part of this venture.

The kit itself is an exquisitely tooled 1/72 armoured fighting vehicle, engineered and designed for a quick build without compromising on quality or detail. Tooling has come a long way since rubber-band tracks and badly fitting parts and our first release of the Panzer III Ausf. A will build rapidly into a stunning replica of a vehicle so far not kitted in injection-moulded plastic in this scale. The kit is complete with external pioneer tools and all the detail modellers have come to expect in this day and age, but with less of the fuss and a full reference manual immediately to hand to tell you all you need to know.

The magazine will focus on German Military equipment moving forward and building into both an excellent reference library and a fine collection of models in 1/72. With ten issues, and ten unique and high quality kits, a year and a very competitive subscriber's offer

The World at War is a publication you really cannot afford to be without!

OSWALD LUTZ
1894 - 1944

OSWALD LUTZ was a German military officer and tank designer. He was the chief designer of the Panzer III tank. He was also the chief designer of the Panzer IV tank. He was a member of the Wehrmacht and served in the German Army during World War II.
