**SHERMAN TRANSMISSION COVER**  
3 Piece - Bolted

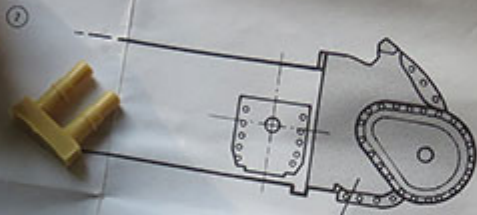

N°344

This conversion kit was made to fit the Tamiya kit N° 1627 M4A3 Sherman. Different types of Shermans have been seen with the 3-piece bolted transmission cover. We suggest you check photographs before you start converting, because some Shermans did not carry this device.

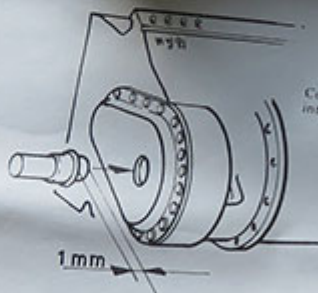

**CAUTION**  
This kit can only be used with cyanoacrylate glue. It is advised to use a good ventilated area.

Remove this part from the kit

Replace by VP's conversion kit as shown here.

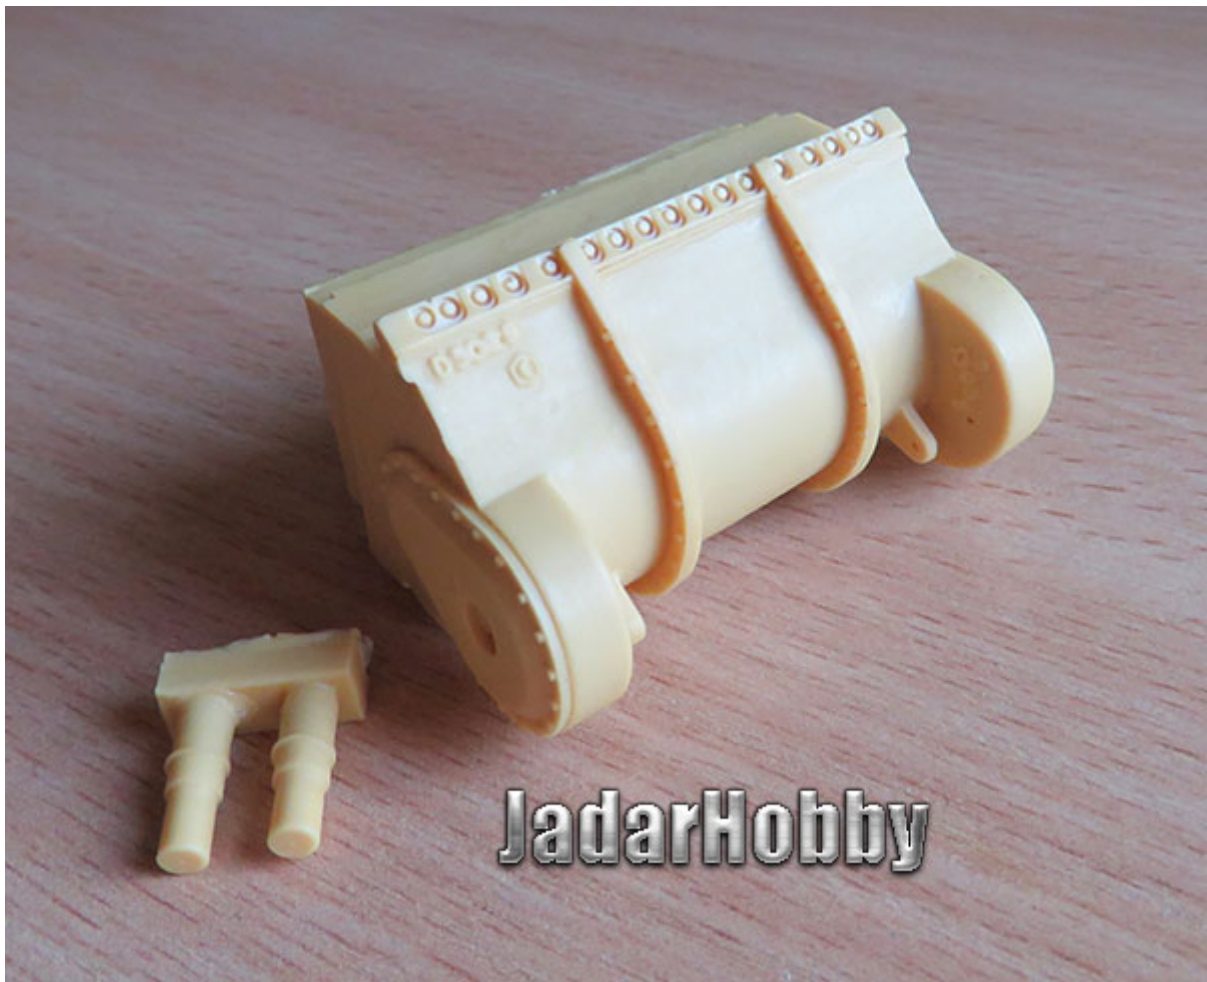

Cut the shafts from their carrier, leaving 1mm to fit into the shaft housing. Secure with cyanoacrylate glue.

To fully update your Sherman kit VP produces a Sherman Update kit (n°204) comprising hatches (early type and late type), different antenna mounts, periscopes, different road wheels and a telephone box.  
Set n°263 is a photo-etched detail set to replace oversized kit parts and to add lifelike realism to your model.  
Ask your local hobby shop for these products.
